                                                                                                                                                                 S
                                                                                                                                                                                                            뮍
                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                          문
                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc which encode human secretory or membrane proteins represented by AAB88317
cc AAB88419. Included in the invention are primers AAP93917 - AAP84295 and Cc AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the Cl AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the Cl AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the Cl AAF62232 - AAF62235 which are used to relate methods for the production of the Cl AAF62232 - AAF62235 which are used to the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene ct therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated Cc with inappropriate secretory protein/membrane protein expression. The cu nucleic acids and complementary sequences may also be used as DNA probes ci and diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. Cc polypeptides may be used as antigens in the production of secretory proteins/membrane polypeptides and their role in metabolism. The cc polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and activity. The antibodies and activity. The antibodies and antagonists for detecting the presence of the polypeptides in samples (e.g. by enzyme cc linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information

preventing, treating or ameliorat Parkinson's diseases and cancers. Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Alzheimer's and

Claim 11; Page 532-533; 607pp; English.

gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human seccreted protein of the invention treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardivascular disorders, angiogenic disorders, kidney disorders. AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87411 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                      The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HAA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alpheimer's, payrings).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60
```

The invention relates to a novel albumin fusion protein. The inv further relates to: a composition comprising the albumin fusion and a pharmaceutical carrier; a kit comprising the composition or albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein.

disorder in a patient comprising the step of administering the albumin tusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the rucleic acid molecule of the albumin fusion protein, and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The calbumin fusion protein and its compositions have the following cartivities: cytostatic, antianaemic, antiarthritic, antiasthmatic, antiarchythmic, cardiant, nootropic, antiipaemic, nephrotropic, uropathic, neuroprotective, antipaexinsonian, tranquilizer, antidiabetic, anabolic, hypertensive, and vulnerary. The albumin fusion protein nucleic acid may be used in gene therapy to treat disorders. The albumin fusion protein fusion protein is cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer). Cc lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS, autoimmune or haematopoietic diseases (e.g. anaemia, Hodgkin's disease, acute autoimmune disease, inflammatory bowel disease, psoriasis or Lyme colonia, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertolilerida, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertolileydig tumours), musculoskeletal diseases (e.g. giant cell tumours, hyper arrhythmia, cardiac arrest, heat valve disease, bypernatraemia or comprisination in sease (e.g. foetal alcohol syndrome, patau syndrome, Patau syndrome, Turner's syndrome, Apert Syndrome or Tay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Down's Byndrome, Patau Syndrome, Turner's Syndrome, Apert Syndrome or Tay Sachs disease), excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meninglis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal hypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial diseases (e.g. Crohn's disease, scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion protein of the invention. The sequence listing data for this specification was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  represents a therapeutic protein X relations of the invention. The sequence listing dowloaded from the USPTO website.

Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin classoners (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders, controlled disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and can diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the discolosure of the invention amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode AAB87414-AAB87454 represent human secreted protein fragments. The genes AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflaallergies, neurological disorders (e.g., Alzheimer's disease, inflammation,

                      AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB8741-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.

Specific uses are described for each of the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, endocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with disorders mentioned above, and in diagnostic immunoassays e.g., radioinmunoassay or enzyme linked inmunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                                                           inflammatory disorder; acquired immune deficiency syndrome; AIDS; Addison's disease; allergy; anaemia; asthma; atherosclerosis; melanoma; crohn's disease; diabetes mellitus; atopic dermatitis; lymphoma; cancer; glomerulonephritis; multiple sclerosis; Grave's disease; osteoarthritis; osteoporosis; psoriasis; rheumatoid arthritis; ulcerative colitis; infection; cell proliferative disorder; actinic keratosis; myeloma;

The present sequence is a human extracellular matrix and cell adhesion consolecule (XMAD). The XMAD is used for screening a compound for effectiveness as an agonist or antagonist of XMAD. The identified agonist cor antagonist are used for treating a disease or condition associated cor antagonist are used for treating a disease or condition associated cor increased expression of functional XMAD. The polynucleotides encoding XMAD are useful in somatic or germline gene polynucleotides encoding XMAD are useful in somatic or germline gene therapy to correct a genetic deficiency, to express a conditionally control of the correct and also for diagnosis of disorders associated with expression of XMAD. They are also used for generating hybridisation probes useful in mapping the naturally occurring genomic associated with expression of XMAD. They are also used for generating corresponding to model human diseases. Oligonucleotide or longer fragments derived from the polynucleotide sequences may be used as cused for the diagnosis of disorders associated with the expression of CXMAD, or in assays to monitor patients being treated with XMAD may be called for the diagnosis of disorders associated with XMAD. Diseases adiagnosed, prevented or treated include genetic disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, allergies, anaemia, asthma, correctial, fungal, parasitic, protozoal and helminthic infections and cancer including breast, bladder, bone marrow, brain and uterus calenoses is adenocarcinoma. Impropries melanoma and myeloma and cancer including breast, bladder, bone marrow, brain and uterus calenoses.

                                                                                        The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA) domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The

Sequence 6277, Application US/09513999C
Patent No. 6783961
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Duclert, A.
APPLICANT: Giordano, J.Y.

```
APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

Patent No. 6783961

FILE REFERENCE: 59. US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 2000-02-24

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTWARE: Patent.pm

SEQ ID NO 6277

LENGTH: 77

TYPE: PRT

ORGANISM: Homo sapiens
FEATURE:
PRATURE:
NAME/KEY: UNSURE
LOCATION: 66

OTHER INFORMATION: Xaa=Cys or Gly

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: MACC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO F.
TITLE OF INVENTION: AERUGIOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: 107196.136
CURRENT FILING DATE: 1099-02-18
PRIOR APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NO.8: 33142
SEQ ID NO. 18035
LENGTH: 783
